

Dear Sir or Madam,

As a student in the final year of my computer science studies at the University of Applied Sciences Technikum Wien, I am hereby applying for an internship as a software developer for the period from February to May 2025. My program requires an 11-week full-time internship, which I view not only as part of my academic requirements but also as a valuable opportunity to deepen my skills in software development and to grow as part of an innovative team.

Throughout my academic career, I have gained extensive knowledge in C#, C++, JavaScript, TypeScript, and basic Angular. I am particularly proud of a project I completed independently: a game that I developed from the idea to its publication on Steam.

During the entire development process, I was responsible for each phase. I began with the conception of the game idea and gameplay, followed by planning the game mechanics. I created a comprehensive design document that detailed the game features and user interface. For the implementation of the game mechanics, I used C# in Unity, which allowed me to deepen my programming skills while finding creative solutions to overcome challenges.

I engaged intensively in testing to ensure that the game was stable and user-friendly. I collected feedback from testers and learned how important iterative improvements are in the development process. This project not only provided me with technical knowledge but also strengthened my self-organization and project management skills.

I look forward to working in an innovative team where I can contribute my knowledge and learn from experienced colleagues.

Thank you for your time and consideration of my application. I look forward to hearing from you.

Sincerely,

Mehmet Melih Solt
